Setting up a Repair Café supported by the public administration requires combining two complementary dimensions: the community's social dynamics, oriented towards citizen empowerment and sustainability, and the administrative and contractual architecture required by the public sector. The Repair Café Badajoz Project, developed by the Asociación FabLab Mérida in collaboration with the Provincial Council of Badajoz, is a real case study of how to structure, tender and run an ongoing programme of community repair workshops under the umbrella of a public circular economy contract.

This guide systematically analyses the whole process of designing, administratively processing, technically equipping, logistically organising and running an institutional Repair Café. The document is based on the key points of the presentation given at Vulca Seminar 2026, and incorporates all the contractual, budgetary and methodological requirements set out in the official tender specifications, technical reports and award records.

All the documents referenced in this guide are attached in the folder to help with their interpretation.

1. Introduction and Territorial Context: From a Community Idea to an Institutional Opportunity

Territorial Context and Social Need

The province of Badajoz is characterised by marked geographical dispersion, with numerous small municipalities spread over a vast territory. The particularities of the rural and semi-rural setting of Extremadura pose structural challenges in terms of social cohesion, the digital divide and access to technical resources. In this scenario, promoting sustainable consumption habits frequently runs up against the lack of community infrastructure where citizens can learn to maintain and repair their everyday belongings.

In the face of the dominant tendency to prematurely discard electronic devices, textiles and furniture, the Repair Café model emerges as a meeting space where neighbours and technicians cooperate to extend the useful life of objects. However, for an initiative of this kind to achieve a lasting and structuring impact on the territory, voluntary action alone needs to be stabilised through strategic alliances with local institutions.

The Role of the Asociación FabLab Mérida

The initiative was driven by the Asociación FabLab Mérida, a non-profit organisation made up of students, graduates and researchers linked to the University of Extremadura. The association combines experience in digital fabrication, ecodesign and prototyping with a solid track record in science and technology outreach (such as the European Researchers' Night, Science Week or international training workshops under the Erasmus+ programme).

FabLab Mérida's position as a maker laboratory and open learning space allowed it to act as a bridge between advanced technical knowledge and the everyday needs of citizens. The association took on the role of technical operator of the project, responsible for logistics management, providing the specialised equipment, coordinating the team of repairers and liaising with the administration.

The Project's Philosophy: Identifying a Real Opportunity

The Repair Café Badajoz Project was not born as an idealised theoretical model or as an abstract business plan. Instead of trying to impose a standard format or seek funding without a clear strategy, the organisation identified a concrete opportunity within the environmental public policies that the Provincial Council of Badajoz was already promoting in the field of circular economy.

Dimension of Analysis	Common/theorical Approach	Approach Applied in Repair Café Badajoz
Origin of the project	Design of a closed, theoretical business plan.	Identification of an opportunity within the administration's strategic lines.
Public funding	Search for one-off grants with no continuity.	Integration into a contractual Dynamic Purchasing System (LCSP).
Relationship with citizens	Provision of a traditional free technical service.	Assisted co-repair methodology and technological sovereignty.
Community structure	Exclusive reliance on unpaid volunteering.	Qualified, paid technical team supported by citizen volunteers.

The success of public-community collaboration does not lie in applying a universal magic formula, but in understanding the competences of the provincial administration (support for municipalities, environmental management, rural development) and aligning the proposal with its sustainability objectives.

2. The Administrative and Legal Framework: Navigating Public Procurement

The Dynamic Purchasing System (SDA Expte. 202/25)

In order to contract in an agile and transparent way the circular economy activities requested by the province's local entities, the Provincial Council of Badajoz set up a Dynamic Purchasing System (Sistema Dinámico de Adquisición, SDA Expte. 202/25), governed by the Particular Administrative Clauses Specification (02_Clausulas Administrativas.pdf) and the Tender Specifications Document (01_Documento de pliegos.pdf), within the framework of Law 9/2017 on Public Sector Contracts (LCSP).

The SDA was structured into four contracting categories or lots:

1. **Category 1**: Management of materials and practical activities.
2. **Category 2**: Outreach actions and programmes, demonstrative practices and awareness-raising.
3. **Category 3**: Surveys, studies, plans, programmes and digital solutions for the circular economy.
4. **Category 4**: Supply and equipment for practical activities.

The Repair Café Badajoz Project fell specifically under **Category 2**, intended for technical assistance in developing awareness-raising actions and demonstrative circular economy practices aimed at citizens.

The Derived Contract CON-SD/2026/40 (Expte. 237/26)

Under the SDA 202/25 framework, the Provincial Council's Department of Environmental Sustainability, Energy and Green Territory processed the specific tender proposal for the derived contract registered under file CON-SD/2026/40 (Expte. 237/26), whose official purpose was defined as: *"Technical assistance for carrying out awareness-raising and demonstrative practice activities on the circular economy through Repair Café sessions"*, as set out in Form III of the technical requirements (04_Requisitos técnicos, Formulario III.pdf).

The contract's justification, issued by the Sustainability and Environmental Education Training Centre (CSEA La Cocosa), stressed the need to give continuity to two years of prior workshop activity at the cultural venue El Hospital Centro Vivo in Badajoz, consolidating the initiative as an urban and provincial reference point.

Eligibility and Administrative Solvency Requirements

For an entity to tender for and be awarded a derived contract of this nature, the Administrative Clauses Specification (02_Clausulas Administrativas.pdf) sets out a series of mandatory administrative conditions:

- **Prior admission to the SDA**: The company or association must have applied for admission and be included in the official list of accepted bidders in the relevant category.
- **Legal capacity and representation**: Registered articles of incorporation or bylaws proving that the corporate purpose is directly related to the services under the contract, together with the powers of attorney of the legal representative.
- **Being up to date with tax and Social Security obligations**: Positive certificates from the State Tax Agency, the Regional Tax Authority and the General Treasury of Social Security.
- **Registration in Bidder Registers**: Registration in the Official Register of Bidders and Classified Companies of the Public Sector (ROLECE) and inclusion of the European Single Procurement Document (DEUC).
- **Electronic invoicing**: Authorisation to issue electronic invoices in Facturae format through the Spanish Government's FACe platform, including the Accounting Office, Managing Body and Processing Unit codes of the Provincial Council of Badajoz (as detailed in the award notification 01_Adjudicación).

Award Procedure and Financial Amount

The tender for the derived contract CON-SD/2026/40 set a deadline for submitting bids of 10 calendar days through the Provincial Electronic Tendering Platform (PLYCA). As recorded in the formal bid (Oferta económica.pdf) and in the registration receipt (SolicitudRegistro.pdf and Entrega.png), the Asociación FabLab Mérida submitted its proposal on 23 April 2026, which was registered electronically on 30 April 2026 at 11:10.

Bids were assessed by combining automatic quantitative criteria (up to 55 points) and qualitative criteria based on value judgement (up to 45 points), detailed in Form III (04_Requisitos técnicos, Formulario III.pdf):

- **Automatic criteria (55 pts)**: Financial offer (up to 35 pts) and pool of additional annual hours at no cost (up to 20 pts).
- **Value-judgement criteria (45 pts)**: Work Plan and methodology (up to 20 pts), Experience and qualifications of the Work Team (up to 15 pts) and Technical and Material Resources provided (up to 10 pts).

The base tender budget set by the Provincial Council was €8,898.74 (excluding VAT). The Asociación FabLab Mérida offered a total amount of **€8,898.70 (VAT-exempt)**, adding an improvement of **4 additional annual hours of work pool at no cost** for holding extra sessions.

By means of the Offer Selection Notification Resolution of 18 May 2026 (00_Resolucion.pdf) and the Official Award Notification of 2 June 2026 (01_Adjudicación), the Contracting Body formally awarded the service to FabLab Mérida as the technically most advantageous bid. The exemption from Value Added Tax was applied in accordance with Article 20.Uno.10º of Law 37/1992 on VAT, as these are teaching and training services in environmental awareness provided by a non-profit entity.

3. Technical Design, Methodology and Work Plan ("Learning by Repairing")

■ Methodological Principles and Technological Sovereignty

The technical proposal approved in the Descriptive Report (Memoria Tecnica.pdf) is built around the **"Learning by Repairing"** (*Aprender Reparando*) methodology. This approach rejects the concept of a passive commercial technical service, where the customer hands over a broken device and collects a repaired product in exchange for payment, in favour of an educational and interactive space.

The intervention is based on three operational pillars:

1. **Promoting responsible consumption**: Raising public awareness of the environmental benefits of extending the useful life of objects as opposed to the culture of rapid obsolescence.
2. **Fostering technological sovereignty**: Empowering attendees to take agency over their technological devices and household items, losing the fear of opening, diagnosing and repairing them. Users are taught to consult free and public sources of knowledge, such as PDF manuals, online video tutorials and community guides from platforms like iFixit and Repair Café International.
3. **Creating a "Third Place"**: Setting up a welcoming social environment where citizens can come not only to repair, but also to share experiences, chat and enjoy a community space.

■ Dynamics of the Repair Sessions

Each Repair Café session lasts a minimum of two continuous hours. The internal operation, described in the Technical Report (Memoria Técnica.pdf) and complemented by the team's guidelines in the Minutes of 10 June 2026 (Acta 10/06/2026), follows a structured four-phase flow:

1. **Reception and Fault Triage**: On arrival, the user registers their object and signs the internal operating rules and liability waiver. A reception technician welcomes them, explains the aims of the day and carries out an initial physical assessment to identify the nature of the problem (electrical, mechanical, textile, etc.) and assign the appropriate work table.
2. **Assisted Repair and Co-repair**: The user sits next to a specialised technician. The professional does not carry out the repair in isolation, but guides the citizen through disassembly, fault detection using measuring instruments (multimeters, soldering irons) and replacement of defective components.

3. **Closing, Survey and Waste Weighing**: Once the intervention is finished (whether successful or not), the event record sheet is completed. The object is weighed on a scale to record the exact amount of waste avoided in kilograms. The user answers a short satisfaction survey and assessment of the educational impact. If immediate repair is technically unfeasible for lack of specific spare parts, the technician advises where to buy the part or recommends going to a professional workshop in the sector.
4. **Coffee Area and Socialising**: While waiting for their turn or after the intervention, participants are invited to the Coffee Area. This space is equipped with hot drinks, herbal teas and baked goods, encouraging conversation between neighbours and strengthening the local community fabric.

Categories of Objects Handled

The sessions are prepared to deal with five major families of household objects, handled by staff with the relevant training:

- **Household electronics and small appliances**: Coffee makers, toasters, blenders, hair dryers, lamps, sound equipment and light power tools.
- **Textiles, clothing and accessories**: Mending seams, replacing zips, patching garments, adjusting hems and repairing bags or backpacks.
- **Bicycles and personal mobility vehicles**: Adjusting brakes and gears, repairing punctures, truing wheels, lubricating chains and replacing cables/housings.
- **Toys and everyday objects**: Mechanical or electronic toys, durable plastic items and miscellaneous household articles.
- **Mobile phones and small digital electronics**: Cleaning charging ports, replacing small batteries, thermal diagnosis of boards and replacing screens or casings.

4. Provision of Material Resources and Human Team

Structure of the Work Team

In accordance with the technical solvency required in the Clauses Specification (02_Clausulas Administrativas.pdf) and the Award Report (Memoria Técnica.pdf), the interdisciplinary team assigned to carrying out the contract consists of 5 professionals with technical and educational profiles.

Detailed Inventory of Tools and Consumables

To guarantee autonomy across the 12 itinerant sessions, the technical proposal deployed complete equipment classified by operational area, detailed in the Technical Report (Memoria Técnica.pdf) and valued in the project inventories (00_RepairBadajoz_Proyecto):

General tools

Item	Units	Item	Units
Precision file kit	3	Precision cutter	3
Precision pliers kit	3	Multipurpose scissors	3
Assorted tool kit - 108 pieces	3	Lighter for heat-shrink tubing	3
iFixit screwdriver kit	3		

Household electronics, phones, toys and small appliances

Electronics and electrical repair

Tools	Units	Consumables	Units
Thermal camera	1	Thermal fuses 172ºC	10
Wire strippers	3	Assorted fuse kit	1
Soldering iron	3	Flexible steel sheet for opening devices	1
Steel wool	3	Copper desoldering braid 3mm	1
Power supply 3-12V	3	Soldering flux RL-422-IM	1
Desoldering pump	3	Thermal sheet, various thicknesses	1
Fibreglass pen	1	Solder wire	3
Charger tester	1	Heat-shrink tubing kit	1
Helping hands	3	PLA filament spool	1
Soldering iron tips	3	Electrical terminal block kit	1
Multimeter	3	Power cables	10
Phone cleaning kit	1	Plug heads	5
3D pen	1	Lamp holders with bulb	3
Crimping tool	1		

Batteries and lithium battery repair

Tool	Units	Consumable	Units
Lithium battery charge manager	1	Small-format lithium batteries	10
Lithium battery tester	1	Alkaline batteries 1.5V LR03 / AAA	100
Spot welder	1	AA R6 battery 1.5V	100
		Lithium battery CR2016 3.0V	30
		Lithium battery CR2025 3.0V	30
		Lithium battery CR2032 3.0V	30
		9V alkaline battery	10

Glues and adhesives

Tool	Units	Consumable	Units
Mini hot glue gun (Ø7mm)	3	Superglue 4g	10
		Hot glue sticks Ø7x100mm - Transparent	20
		Pattex Repair Extreme stick 5g	5
		Epoxy or two-part adhesive	1

Clothing and textile accessories

Item	Units	Consumables	Units
Sewing machine	1	Fabrics of various types	12
Tailor's chalk	5	Zips	8
Machine needles	5	Sewing thread case	1
Pins	500	Buttons	100
Scissors	2		
Tape measure	1		
Hand needles	10		
Sewing rulers	1		

Bicycles and mobility components

Item	Units	Consumable	Units
Allen key set	2	Puncture repair kit	1
Torx keys	1	Belt lubricant	1
Manual air pump with pressure gauge	1	Sealant liquid	1
Presta (Mauser) air pump	1	Assorted screws and threaded parts	1
Chain breaker	1		
Ratchet wrench set	1		
Spoke wrench set	1		

Furniture repair

Item	Units	Consumable	Units
Carpenter's hammer	1	Wood glue	2
Square	1	Hinges	10
Metal ruler	1	Brackets	10
Retractable tape measure	1	Screws and nuts kit	1
Bar clamps	4	Sandpaper GR60, 80, 100, 120 and 240	3
Japanese saw	1	Wood filler	1
Spirit level	1	Sanding block	3
Spatula	1		

Cleaning, organisation, advertising and safety

Cleaning

Item	Units	Item	Units
Isopropyl alcohol 99.9% 1L	1	Cleaning cloth	4
MTN ethyl alcohol spray	1	Cleaning brush	1
Cleaning brush set (steel/brass/nylon)	1	Box of cotton swabs	1
Canned compressed air	1	Brush and broom	1

Organisation and infrastructure

Item	Units	Item	Units
Carry case	5	Toolbox	1
Organiser drawer unit	1	Mobile tool drawer	1
Portable table	1	Power strip (min. 3 sockets)	3
25m extension lead	1		

Advertising

Item	Units	Item	Units
Information cards	500	Signage	1

Safety

Item	Units	Item	Units
First aid kit	1	Toolbox	1
Organiser drawer unit	1	Mobile tool drawer	1

Coffee Area

The consumables in this classification are indicated per Repair session. It is important that supplies are always available to encourage the socialising space this proposal aims to build.

Item	Units	Consumable	Units per session
Electric coffee maker	1	Coffee	1
Organiser box	2	Decaffeinated coffee	1
Kettle	1	Herbal tea kit	1
Tea infuser filter	5	Milk packs	1
		Food (pastries and fruit)	1
		Sugar	1
		Sweetener	1
		Disposable cups	30
		Disposable plates	15
		Disposable spoons	30
		Napkins	100

5. Operational Execution, Timetable and Economic-Financial Management

Official Session Calendar

Form III of file CON-SD/2026/40 (04_Requisitos técnicos, Formulario III.pdf) sets a contract execution period of 18 months, during which **12 ordinary Repair Café sessions** are scheduled. The sessions are held on Saturday mornings on a monthly basis, strategically coinciding with the days of the Badajoz Local Producers' Market in order to maximise public attendance.

The schedule of activities approved in the Technical Report (Memoria Técnica.pdf) covers the following dates at the Hospital Centro Vivo venue in Badajoz:

- **2026 financial year**: 5 June, 3 July, 4 September, 2 October, 6 November and 4 December.
- **2027 financial year**: 6 February, 6 March, 3 April, 8 May (moved from the 1st because of a public holiday), 5 June and 3 July.
- **Closing phase**: Submission of the reports and supporting documents required by the Provincial Council in September 2027, with the definitive closure of the file in October 2027.

Layout of the Physical Space and Signage

The internal organisational guidelines agreed by the team in the Minutes of 10 June 2026 (Acta 10/06/2026) establish a functional distribution of the spaces in the arcade gallery of the Hospital Centro Vivo, in order to optimise the flow of participants and maintain safety measures:

- **Access and Welcome**: Installation of an institutional "Zona Repair" roll-up banner and a directional arrow sign at the main entrance.
- **Mapping of Repair Tables**: Physical separation between the work tables placed under the arches to avoid crowding, assigning independent areas for electronics, textiles and mechanics.
- **Location of the Coffee Area**: Placed at the back of the venue to encourage users to walk past the work tables and to keep them in the space after completing their repair.

Economic Structure and Internal Distribution of the Budget

The economic breakdown of the project, recorded in FabLab's expense control sheets (00_RepairBadajoz_Proyecto), reflects the real distribution of the €8,898.70 awarded among the various operational items:

- **Personnel costs (€6,040.00 - 67.8%)**: Preparation and logistics hours, administrative management hours and a reserve pool for unforeseen events. Allowances for volunteers' travel and meals.
- **Materials and Equipment (€2,077.22 - 23.3%)**: Initial inventory of tools and infrastructure, consumables per event and a reserve for unforeseen material.

Justification and Electronic Payment Procedure

In accordance with clause 28 of the Particular Administrative Clauses Specification (02_Clausulas Administrativas.pdf) and the award notification (01_Adjudicación), payments are made periodically after each session or block of sessions has been carried out. The administrative procedure for releasing payments requires the submission of the following documentation:

1. **Positive Acceptance Certificate**: An official document signed in triplicate by both the legal representative of the contractor (Víctor Gallardo Sánchez or Carlos Gómez-Landero) and the Contract Manager of the Provincial Council (Álvaro Jiménez García).
2. **Electronic Invoice in FACe**: Electronic submission of the invoice to the General Point of Entry for Invoices (FACe), stating the administrative identifiers of the file:
    - Contracting File Number: `237/26`
    - Expenditure File Number: `CON-SD/2026/40`
    - Budget Item: `15 4200 22799 0200`
3. **Third-Party Registration Certificate**: Proof of the bank account registered with the Provincial Treasury of the Provincial Council of Badajoz.

6. Comparative Perspective and Lessons Learned from Public-Community Collaboration

■ Comparative Analysis: Institutional Model vs. Autonomous Community Model

A comparative analysis between the Repair Café Badajoz Project and the experience developed by Carlos Alcobia through Buinho Associação in Messejana (Portugal) makes it possible to identify the advantages and constraints of funding a repair workshop through public procurement compared with a dynamic of local self-organisation.

Comparison Criterion	Repair Café Badajoz	Messejana Experience (Carlos Alcobia / Buinho)
Driving framework	Institutional collaboration through a contractual tender.	Grassroots community initiative based on local volunteering.
Funding and resources	Allocated public budget (€8,898.70) for fees and materials.	Self-management, tool donations and gift economy.
Structure and control	Tender specifications, strict inventories, acceptance certificates and FACe invoicing.	Informal neighbourhood dynamics, flexible hours and light logistics.
Territorial coordination	Recursivity within an institutional space, with the possibility of moving between other public spaces	Continuous roots in a small-scale rural community.

The comparison shows that there is no single recipe. While public support frees organisers from the pressure of raising funds and allows them to acquire high-quality professional tools, it introduces a considerable bureaucratic burden that requires professionalising administrative management.

The Invisible Dimension of Institutional Collaboration

Working with public administrations means taking on an "invisible part" that does not appear in the photographs of the repair days:

- **Intensive communications management**: Dozens of emails and phone calls to coordinate dates with the venue managers of the cultural spaces and with the Provincial Council of Badajoz.
- **Rigidity of administrative deadlines**: The need to adapt the association's pace to the processing times of files, procurement boards, resolutions and invoice payments.
- **Flexibility in the face of unforeseen events**: The ability to adjust the frequency of sessions (up to a 20% variation allowed in the specifications) according to the unforeseen needs of the provincial administration.

What the Administration Needs and What the Organisation Needs

The success of the Repair Café Badajoz Project rests on a clear understanding of the mutual needs of the public sector and the third sector:

- **What the Administration demands of the Organisation**: Proven technical solvency, strict compliance with labour and tax legislation, rigorous data records (weighings, surveys), autonomous logistics capacity and health and safety guarantees for the activities.
- **What the Organisation requires of the Administration**: Stable and accessible technical counterparts (such as the staff of the Environmental Sustainability Department), clarity on institutional objectives, easy access to public premises and punctual payment of invoices.

7. Ten Recommendations for New Initiatives

As an operational summary, the project's conclusions offer ten essential recommendations for groups or organisations wishing to set up a Repair Café funded by local administrations:

1. **Start with the local context**: Learn the environmental priorities and the grant or procurement lines of the municipal or provincial body.
2. **Be legally constituted**: Have registered legal personality (association, cooperative) and be up to date with tax obligations in order to contract with the public sector.
3. **Appoint a project coordinator**: Centralise technical and administrative liaison in one person with management skills.
4. **Go to meetings with a finished proposal**: Present municipal technicians with a clear methodological report specifying objectives, types of objects, itemised budget and space needs.
5. **Make use of open knowledge**: Rely on the global Repair Café International and iFixit network to use internal rules, signage and repair guides that have already been tested.
6. **Do not pay for citizen volunteer work, but do professionalise management**: Clearly distinguish between the technical staff responsible for the activity and the community of volunteers who collaborate occasionally.
7. **Take care of documentation and evidence**: Photograph the sessions, record the surveys and rigorously weigh the repaired objects in order to justify the environmental and social impact.
8. **Design the space with the user in mind**: Take care over signage, the arrangement of work tables and the quality of the Coffee Area as a space for conviviality.
9. **Anticipate the administration's technological requirements**: Check in advance that the digital certificate works, that you are registered on the electronic tendering portal and that you can issue invoices in FACe.
10. **Remember the role of public support**: The administration's backing is a tool for creating the material and logistical conditions, but the soul of the Repair Café still lies in the involvement of the people who come to repair and learn together.

List of Attached Documentary Annexes

1. Tendering and Administrative Processing Block (Provincial Council of Badajoz)

These are the framework documents and official forms of the public procurement file:

- **SDA Framework File (202/25):**
  - **Particular Administrative Clauses Specification (PCAP):** Governs the Circular Economy Dynamic Purchasing System (€940,000 in 4 lots).
  - **Technical Specifications (PPT) / Form II:** Defines Category/Lot 2 (Outreach actions, demonstrative practices and awareness-raising).
  - **Official annexes to the PCAP:**
    - **Annex I:** Model Application for Admission / Participation in the SDA.
    - **Annex II:** Model Financial Offer (where the offer of €8,898.70 and the pool of 4 extra hours at no cost is formalised).
    - **Annex III:** Instructions and standard form of the **DEUC** (European Single Procurement Document).
    - **Annex IV:** Model Commitment to Form a Joint Venture (UTE).
    - **Annex V:** Responsible Declaration of Membership of a Business Group.
- **Derived Repair Café File (CON-SD/2026/40 / Expte. 237/26):**
  - **Form III:** Technical Proposal of the Tender for carrying out the 12 Repair Café sessions.
  - **Offer Selection Notification:** Official document with verification code `ae547a965b03167e` (18-05-2026).
  - **Award Notification and Resolution:** Official administrative document with verification code `379b3056890d9aeb` (01/02-06-2026).
  - **Positive Acceptance / Conformity Certificate:** Document in triplicate signed between the Provincial Council and FabLab Mérida at the end of the service.

2. Electronic Registration and Electronic Invoicing Block

The digital receipts proving submission and payment:

- **Proof of Entry in the Register (SIR / PLYCA):** General Entry No. 16533 dated 30/04/2026 (11:10) submitted by Carlos Gómez-Landero Hernández.
- **Screenshot / Electronic Fingerprint Record:** File `Entrega.png` from the PLYCA Empresas platform (confirmation of the 3 steps of electronic submission).
- **Third-Party Registration and Bank Certificate:** Provincial Treasury document required for processing payments.
- **FACe Codes and Data:** Electronic invoicing parameters (Accounting Office, Managing Body, Processing Unit, File No. `237/26` and Operation No. `CON-SD/2026/40`).

3. Technical and Budgetary Block of the Project

The substantive documentation drafted by FabLab Mérida:

- **Technical Report / Project Descriptive Report:** Drawn up in Mérida on 23 April 2026. It develops the "Learning by Repairing" methodology, the 3 key objectives, the 5 types of objects, safety, the 12 sessions (May 2026 - October 2027) and the breakdown of equipment.
- **Internal Budget Breakdown Sheet (`00_RepairBadajoz_Proyecto`):** Purchase budget sheets, breakdown by event, mileage (at €0.26/km) and personnel hours (at €40/h).
- **Monthly Budget Centro Vivo (`PRE20260119115529`):** Standard invoice/budget of €300/session (total €3,000, VAT-exempt under Art. 20.Uno.10º of the VAT Law).

4. Operational Session Toolkit (Field Documents)

Materials handled physically during each repair workshop:

- **Reception, Diagnosis and Triage Form:** Initial record of the object and the fault.
- **Liability Waiver and Internal Rules Form:** Document signed by attendees before the repair.
- **Repair Record Form / Repairer's Sheet:** Control of the technical process carried out by the specialists.
- **Avoided Waste Weighing Form:** Measurement of environmental impact in kg of CO2/waste avoided.
- **Anonymous Citizen Evaluation Survey:** Satisfaction and community impact questionnaire.
- **Session Organisational Minutes:** Document covering space layout, signage ("Zona Repair"), role assignment and budget distribution sheet.
- **Graphic Materials and Infrastructure:** Signage, information cards (500 units), entrance roll-up.

5. External Sources and Technical References

- **iFixit platform:** Teardown guides and manuals (`https://es.ifixit.com/`).
- **Repair Café International Foundation:** Community repair guides and the RepairMonitor database (`https://www.repaircafe.org/`).
- **Messejana experience (Portugal):** Comparative reference for rural community development driven by Carlos Alcobia (Buinho Creative Hub).
